

## Seeing Farther into the Universe: A look at the James Webb Space Telescope

Join the **Friends of Arlington's David M. Brown Planetarium** as we host a **Discovery Day** to learn about the new James Webb Space Telescope! The JWST, which will be launched in December, is the biggest, most sensitive space-based observatory ever built.

Unlike the famous Hubble Space Telescope, the JWST will look at the universe in the infrared wavelengths. But what does that mean? How does it work? What will the JWST see?

Come to the event to learn all about it! (Portions of the event will be streamed live, for those who cannot attend in person)

**Arlington Mill Community Center**  
**Sunday, November 14, 2021**  
**2:00pm - 5:00pm**
